

BELLA PLAYA

ECCO

Energy

We have 102 solar panels used to heat water in the hotel, and 10 solar panels used to heat water for the swimming pool and spa.

A program has been designed to replace all traditional light bulbs in the hotel with low consumption bulbs.

All the guest rooms in the hotel have automatic thermostats and turn-off mechanisms to minimize unnecessary air conditioning and heating usage.

Water

We have designed a water saving program for our in-house laundry of bed linens and towels, designed to utilize the minimum amount of water.

In our gardens we utilize a watering system consisting of micro-droplet watering and micro sprayers to minimize water usage. Whenever possible, autonomous plants are selected for our gardens that require a minimum of water.

We have strict control programs to insure maximum water quality and detection of leaks to prevent unnecessary waste.

The swimming pool in the Spa is filtered and maintained using natural mineral salts.

All gas refrigerants utilized by the hotel are ozone friendly, all detergents and cleaning products are ecologically safe.

Recycling

We recycle all glass, plastic, paper, and cardboard.

We recycle food and vegetable waste for composting.

Whenever possible we utilize return bottles, and every effort is made to purchase products that have recyclable packaging.

We have a strict system to separate and recycle, or reuse all building materials used for maintenance and renovations in the hotel.

All paper products purchased by the hotel are recycled products.

Whenever possible office products are purchased that are recyclable and eco-friendly.

Food and Beverage

Whenever possible our products are purchased from local or regional sources.

We try and avoid products that contain chemical fertilizers, fungicides or herbicides.
